

ERRATA

The Health Freedom Index is intended to provide an accurate and transparent assessment of health policy freedom across the 50 states and the District of Columbia. There are 2,754 unique scores (51 jurisdictions x 54 variables each), and thus it is not surprising that we might find some post-publication errors. As we identify scoring errors, we will collect and share them here.

Rather than republishing the full report each time a minor error is identified, this errata document will serve as the authoritative record of corrections to be made to the next published edition. We appreciate readers who bring potential errors to our attention. If you think you have spotted a scoring error and would like to report it, please reach out to the points of contact listed in the published report.

- In variable #34 (insurance coverage mandates): Montana, Nebraska, North Dakota, South Carolina, South Dakota, Tennessee, and Utah all received a score of 2, but should have received a 4.
